Africa's population growth rate was about 2.34% in 2025, a decrease from previous years but still significantly higher than most other regions. The continent's population, currently over 1.5 billion, is projected to grow to 2.5 billion by 2050, with five African countries expected to account for more than half of the global population increase between now and 2050. This growth is driven by declining mortality rates and increasing life expectancy.

Key statistics and projections

- **2025 growth rate:** Approximately 2.34%.
- **Projected 2050 population:** Roughly 2.5 billion.
- **Projected 2070 population:** Could more than double from current levels to around 3.2 billion.

- **Total population (2025):** Around 1.53 billion.

تطور نسبة
سكان
الحضر في
قارة أفريقيا

سجلت منطقة جنوب الصحراء الكبرى معدل نمو سكاني حضري سنوي قدره ٤.١ في المائة، مقارنة بالمعدل العالمي البالغ ٢.٠ في المائة. وكما هو موضح في الشكل أدناه، هناك بالفعل ١٤ دولة في القارة تتجاوز معدلات النمو الحضري فيها هذا المعدل

Children make up almost half of Africa's population, accounting for roughly 47% of the total population, according to UNICEF Data. This makes Africa the continent with the largest child population in the world, representing approximately 25% of all children globally, notes UNICEF Data.

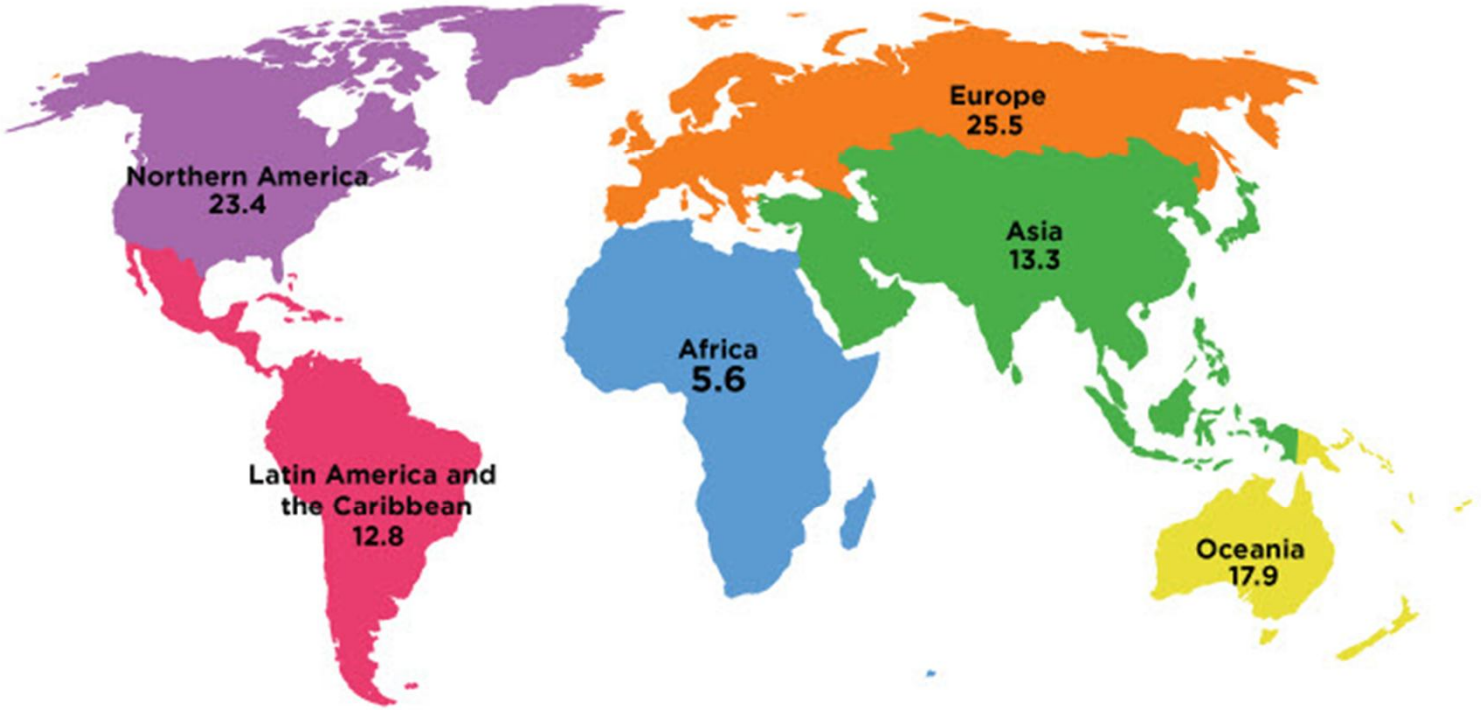

- **Proportion of Africa's population:** Children (under 18) make up approximately 47% of the total population of Africa.
- **Proportion of global child population:** Africa accounts for about 25% of the world's child population.
- **Projected growth:** This is the largest child population of any continent, and it is projected to continue growing significantly.
- **Contributing factors:** Factors contributing to the high child population include Africa's high fertility rate, which is well above the world average, and declining mortality rates.
- **Country-specific data:** Some countries have a very high percentage of their population under 18, such as the Central African Republic, where over 56% of the population is under 18.

In North Africa and Sub-Saharan Africa, around 40-43% of the population is under 15, making Africa the continent with the youngest population globally. Sub-Saharan Africa has a particularly large proportion of children, with some sources citing figures around 40-43% for the under-15 age group and 70% under 30. This young demographic is a significant opportunity if the youth are empowered with access to education and healthcare.

Sub-Saharan Africa:
Approximately 40-43% of the population is under 15. The median age is very low, around 20 years. More than 70% of the population is under the age of 30.

North Africa:
North Africa has a similar youth demographic, with the under-15 population also making up a significant portion of the total. For instance, Algeria has a large child population of over 16 million.

The Demographic Transition theory

Stage	1 High stationary	2 Early expanding	3 Late expanding	4 Low stationary	5 ? Declining?
Examples	A few remote groups	Egypt, Kenya, India	Brazil	USA, Japan France, UK	Germany
Birth rate	High	High	Falling	Low	Very low
Death rate	High	Falls rapidly	Falls more slowly	Low	Low
Natural increase	Stable or slow increase	Very rapid increase	Increase slows down	Stable or slow increase	Slow decrease
Reasons for changes in birth rate	Many children needed for farming. Many children die at an early age. Religious/social encouragement. No family planning.		Improved medical care and diet. Fewer children needed.	Family planning. Good health. Improving status of women. Later marriages.	
Reasons for changes in death rate	Disease, famine. Poor medical knowledge so many children die.	Improvements in medical care, water supply and sanitation. Fewer children die.		Good health care. Reliable food supply.	

Average Crude Birth and Death Rates

معدل المواليد في أفريقيا ٣٨ في الألف والوفيات ١٤ في الألف وبالتالي الزيادة الطبيعية ٢٤ في الألف وهى الأعلى بين قارات وأقاليم العالم

Fig. 7-2b, p. 130

Birth and death rates for Africa (approximate 2023-2025)

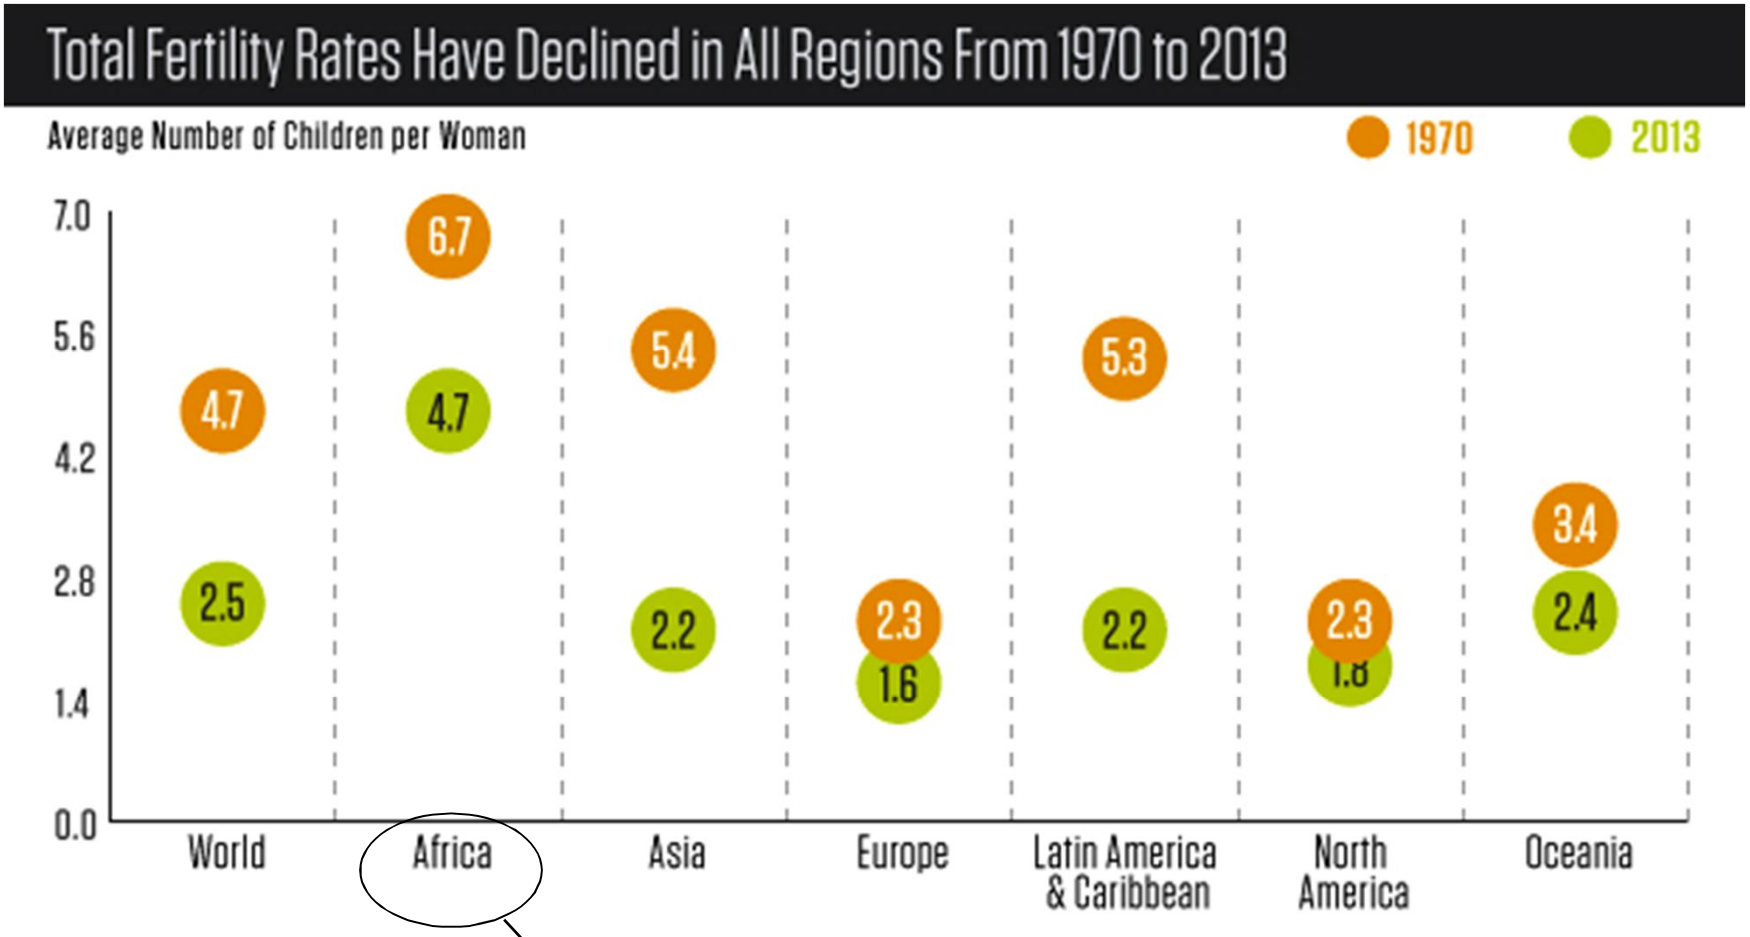

- **Birth Rate:** Approximately 30.91 births per 1,000 people (2025 estimate).
- **Death Rate:** Approximately 7.60 deaths per 1,000 people (2023 estimate).
- **Global Birth Rate:** Approximately 17 births per 1,000 people (2024 estimate).
- **Global Death Rate:** Approximately 7.9 deaths per 1,000 people (2024 estimate).

Regional and country-specific rates

- **Sub-Saharan Africa:** The birth rate is higher than the African average, at approximately 32.82 per 1,000 people.
- **South Africa:** The birth rate is lower, at approximately 19.6 per 1,000 people (2024 est.), while the death rate is 8.7 per 1,000 people (2024 est.).
- **Nigeria:** The birth rate is approximately 34.19 per 1,000 people (2022 est.), while the death rate is 8.7 per 1,000 people (2022 est.).

Key factors

- **Fertility:** Africa's fertility rate of about 4.0 births per woman is substantially higher than the global replacement-level fertility of 2.1.

سيُفاقم تغير المناخ من ظاهرة الهجرة البيئية. يُؤدي الارتفاع المُطرد في درجات الحرارة العالمية نتيجةً لتغير المناخ إلى جعل بعض المناطق في أفريقيا غير صالحة للسكن (بسبب ندرة المياه، وموجات الحر الشديدة، وتزايد تفشي الأمراض، من بين عوامل أخرى)، مما يُسبب زيادة في الهجرة.

يُسرّع تغير المناخ من وتيرة الهجرة من الريف إلى المدن إلى المدن الكبرى في أفريقيا. من المتوقع أن تنمو أكبر سبع مدن ساحلية في أفريقيا - لاغوس، ولواندا، ودار السلام، والإسكندرية، وأبيدجان، وكيب تاون، والدار البيضاء - بنسبة ٤٠% بين عامي ٢٠٢٠ و٢٠٣٠. وسيُفاقم الضغط المزدوج الناتج عن النمو السكاني وارتفاع منسوب مياه البحر، على البنية التحتية، والزراعة، وإمكانية حصول المواطنين الأفارقة في المدن الساحلية على المياه، من خطر أزمات الحوكمة والأمن.

كما تُساهم الكوارث الطبيعية - من فترات جفاف أطول إلى عواصف وفيضانات أشد - في زيادة الهجرة. فعلى مدار العقد الماضي، نزح ما متوسطه ٢.٥ مليون أفريقي مؤقتًا كل عام بسبب الكوارث الطبيعية. إن الأضرار المتكررة التي تلحق بالبنية التحتية وسبل العيش تؤثر على القدرة على الصمود، مما يتسبب في انتقال المزيد من السكان على المدى الطويل، وحتى بشكل دائم.

Climate Change Will Drive Migration

تتنوع اتجاهات الهجرة من القارة الأفريقية، لكن المسارات الرئيسية هي داخل القارة (داخل أفريقيا)، وشمالاً (باتجاه أوروبا عبر شمال أفريقيا)، وشرقاً (باتجاه شبه الجزيرة العربية)، وجنوباً (باتجاه جنوب أفريقيا). داخل القارة، غالباً ما تنتقل الهجرة من المناطق الريفية إلى المناطق الحضرية.

Major Routes of Migration in Africa
